Ref #	Hits	Search Query	DBs	Default Operator	Plurals	Time Stamp
L48	0	A method of orienting a spherical object comprising acquiring an image of a spherical object at an imaging station analyzing the image with a first computer to determine an orientation analysis transferring the object from the imaging station to orienting stations using a transfer mechanism the transfer mechanism comprising a rotary indexer having multiple extendable vertical arms each arm having a vacuum cup for picking up holding and carrying the object to a station using vacuum suction so the object does not rotationally slip and the object remains rotationally fixed during transfer from station to station and orienting the object to a	USPAT; UPAD	AND	ON	2011/01/14 12:21

		predetermined orientation at each orienting station according to the orientation analysis wherein the orienting stations comprise first second and third stations each station having a motorized rotating object holder with a vacuum cup for receiving the object from the vacuum cup of the rotary indexer and rotating the object about a single axis the first second, and third stations collectively orienting the object by rotation about axes that are alternately perpendicular the rotating object holder being rotated on a spindle coupled to a motor
